Experience

Tracxn

Nov 2023 – Present

Software Engineer

- Architected a centralized **OAuth2** authorization server on **Java 17** and **Spring Authorization Server** with encrypted access and refresh tokens, consolidating secure authentication across microservices into one standardized issuance flow.
- Led migration from standalone MySQL to a **3-node Percona XtraDB Cluster** fronted by **ProxySQL**, achieving **~99.9%** availability with horizontal read scalability and eliminating single-node database downtime risk in production systems.
- Engineered a multi-gateway payment platform integrating **Stripe** and **Razorpay** via the **Factory pattern**, with automated reconciliation jobs that reduced payment errors by **~98%** and improved billing reliability for payment checkout flows.
- Architected event-driven invoicing that auto-generates tax-compliant invoices on payment success by orchestrating **Zoho** with Stripe and Razorpay over **Kafka**, with idempotency guards ensuring reliable billing without duplicate invoices.
- Integrated single sign-on with **12+** identity providers including Google, Microsoft, Okta, Entra ID, PingOne, PingFederate, and Shibboleth over **OIDC** and **SAML**, reducing enterprise onboarding friction by **~25%** across new accounts.
- Designed a configurable authentication framework supporting password, email OTP, two-factor authentication, passkeys with **WebAuthn**, and enterprise **SSO**, enabling accounts to enforce granular login policies at user and group levels.
- Built a low-latency authorization and entitlement resolution layer backed by **Redis** caching to validate sessions and access at scale, cutting repeated database lookups while serving platform-wide API authorization checks reliably.
- Eliminated authentication service post-deploy cold-start API spikes (up to ~30s for ~5 minutes) and cut system load from ~80 to ~3 on a 2-core instance by warming DB/**Kafka** pools and removing synchronized per-request env/cache loading.
- Reduced payment API latency from **15s to 2s** and lowered database load by **~70%** through query optimization and fetch-strategy tuning, delivering faster checkout experiences under high concurrent transaction volumes across the platform.

Buyume

Mar 2023 – Oct 2024

Software Engineer Intern

- Developed scalable **REST APIs** for CRM and mobile platforms using **Node.js**, **Express**, and **MongoDB**, serving millions of users with layered architecture, consistent error handling, and efficient data access patterns across product modules.
- Improved API response time by **~30%** through MongoDB query optimization and strategic indexing on high-traffic endpoints, reducing latency and improving overall mobile and CRM application responsiveness for end users platform-wide.
- Designed a user engagement scoring system tracking behavioral metrics to power personalized recommendations, increasing user retention by **~20%** and enabling data-driven product decisions across the platform experience for growth.

Projects

MarketPlaceX — Classifieds Marketplace Platform

Oct 2022 – Nov 2022

- Built a full-stack classifieds marketplace with **REST APIs**, layered backend architecture, and **MongoDB** persistence, enabling dynamic listings, search, and responsive browsing for buyers and sellers across the platform marketplace.

Tech Stack: React, Node.js, Express, MongoDB, REST APIs

Skills

- **Languages:** Java, JavaScript
- **Frameworks:** Spring Boot, Spring Security, Node.js, Kafka
- **Tools:** Docker, Postman, Git
- **Platforms:** AWS, Linux
- **Database & Caching:** MySQL, Percona XtraDB Cluster, ProxySQL, Redis, MongoDB

Education

Shri Mata Vaishno Devi University

B.Tech in Computer Science; CGPA: 7.65

Jul 2019 – Jul 2023

Jammu & Kashmir
