Backend Software Engineer skilled in designing scalable microservices, OAuth2/OIDC authentication, payment systems, and event-driven architectures using Java, Spring Boot, Redis, Kafka, and MySQL.

Experience

Tracxn, Bangalore, India

November 2024 – Present

Software Engineer

- Architected a centralized **OAuth2** authorization server on **Java 17** and **Spring Authorization Server** with encrypted access and refresh tokens, consolidating secure authentication across microservices into one standardized issuance flow.
- Integrated single sign-on with **12+** identity providers including Google, Microsoft, Okta, Entra ID, PingOne, PingFederate, and Shibboleth over **OIDC** and **SAML**, reducing enterprise onboarding friction by **~25%** across new accounts.
- Designed a configurable authentication framework supporting password, email OTP, two-factor authentication, passkeys with **WebAuthn**, and enterprise SSO, enabling accounts to enforce granular login policies at user and group levels.
- Built a low-latency authorization and entitlement resolution layer backed by **Redis** caching to validate sessions and access at scale, cutting repeated database lookups while serving platform-wide API authorization checks reliably.
- Engineered a multi-gateway payment platform integrating **Stripe** and **Razorpay** via the **Factory pattern**, with automated reconciliation jobs that reduced payment errors by **~98%** and improved billing reliability for self-checkout flows.
- Reduced payment API latency from **15s to 2s** and lowered database load by **~70%** through query optimization and fetch-strategy tuning, delivering faster checkout experiences under high concurrent transaction volumes across the platform.
- Led migration from standalone MySQL to a **3-node Percona XtraDB Cluster** fronted by **ProxySQL**, achieving **~99.9%** availability with horizontal read scalability and eliminating single-node database downtime risk in production systems.
- Architected event-driven invoicing that auto-generates tax-compliant invoices on payment success by orchestrating **Zoho** with Stripe and Razorpay over **Kafka**, with idempotency guards ensuring reliable billing without duplicate invoices.
- Tech Stack:** Java, Spring Boot, Spring Security, Spring Authorization Server, MySQL, Percona XtraDB Cluster, ProxySQL, Redis, Kafka, Zoho, OAuth2/OIDC, SAML

Buyume, Remote

March 2023 – October 2024

Software Engineer Intern

- Developed scalable **REST APIs** for CRM and mobile platforms using **Node.js**, **Express**, and **MongoDB**, serving millions of users with layered architecture, consistent error handling, and efficient data access patterns across product modules.
- Improved API response time by **~30%** through MongoDB query optimization and strategic indexing on high-traffic endpoints, reducing latency and improving overall mobile and CRM application responsiveness for end users platform-wide.
- Designed a user engagement scoring system tracking behavioral metrics to power personalized recommendations, increasing user retention by **~20%** and enabling data-driven product decisions across the platform experience for growth.
- Tech Stack:** Node.js, Express, MongoDB, REST APIs

Projects

MarketPlaceX — Classifieds Marketplace Platform

2023

- Built a full-stack classifieds marketplace with **REST APIs**, layered backend architecture, and **MongoDB** persistence, enabling dynamic listings, search, and responsive browsing for buyers and sellers across the platform marketplace.
- Tech Stack:** React, Node.js, Express, MongoDB, REST APIs

XFlix — Video Hosting and Streaming Platform

2022

- Developed a video hosting platform supporting upload and streaming workflows with **REST APIs** and cloud deployment on Netlify and Heroku, delivering reliable media delivery and a responsive viewing experience for end users online.
- Tech Stack:** React, Node.js, Express, MongoDB, Netlify, Heroku

Skills

Languages: Java, JavaScript, SQL | **Frameworks:** Spring Boot, Spring Security, Spring Authorization Server, Node.js, Express

Databases & Caching: MySQL, Percona XtraDB Cluster, Redis, MongoDB, ProxySQL, HikariCP | **Messaging:** Apache Kafka

Tools: Git, Docker, AWS, Postman, IntelliJ IDEA | **Concepts:** REST APIs, OAuth2, OIDC, JWT, SAML, WebAuthn, RBAC,

Microservices, Distributed Systems, Event-Driven Architecture

Education

Shri Mata Vaishno Devi University, Jammu, India

2019 – 2023

B.Tech in Software Engineering — CGPA: 7.65
